

# "Parabone" - a Herringbone- style Rear Milker

- A stall for rear milking in a herringbone configuration with a platform width of 2 m
- BouMatic has designed it
- BouMatic has built it
- The ideal thing to fit out a narrower building, whether new or old, with a rear-milking parlour, to milk well-positioned cows quickly and gently

## The "Parabone" Stall:

- Rear milking
- Cows positioned at 60°, stall spacing 762 mm
- Angled rump panels
- Fix adjustable or indexable brisket rail
- Suspended stall, pieces bolted together, hot-dip galvanized construction with solid, size 60 mm support arches
- Entrance and exit gates operated manually or by automated vacuum or air operation
- Platform 2 m wide, total width 6 m for a double herringbone configuration

**F**ixed and adjustable brisket rail.

**I**ndexable brisket rail: by swinging it out of the way along the wall, cows leave faster and more easily.

**T**he angled, custom cow fit rump panels protect the milker and the equipments, and they ensure the cow is properly indexed.
